What are the requirements if an electrical substation or solar panel field is contiguous or adjacent to a stationary source that has a general permit, non-Title V permit, or Title V permit?

If an electrical substation or solar panel field is contiguous or adjacent to a stationary source that has a general permit, non-Title V permit, or Title V permit, the permit should include a dust control plan that includes the electrical substation or solar panel field. The electrical substation or solar panel field must be inspected at least monthly, and the stationary source must be inspected in accordance with the permit. Records must be kept of all associated inspections.
